

POWER BI IS NEVER “ONE AND DONE”

Continual improvement is not post-project maintenance. It is the operating model that keeps analytics relevant.

VISUALISE

OPTIMISE

REPEAT

Content changes because the business changes.

and uncover insights

VISUALISE

Design clear, relevant
visuals that drive
understanding

OPTIMISE

Improve models, measures
and performance. Simplify
and add value.

REPEAT

Learn, adapt and evolve.
Better today than
yesterday.

The deliverable is not a destination

A report launches into a moving organisation, not a frozen specification.

“DONE”

A point-in-time release

Metrics

Definitions, targets and ownership shift.

Questions

The first insight creates the next question.

Data

Sources grow, quality issues emerge and history accumulates.

Platform

Power BI capabilities and accepted patterns evolve.

Treat release as the start of feedback, not the end of responsibility.

Static delivery creates entropy

The choice is not change versus no change. It is managed change versus unmanaged workarounds.

Requirements are discovered through use

Analytics changes the conversation. Usage exposes new needs, weak assumptions and better questions.

Each answer creates evidence for the next iteration

A fixed backlog is not a stable business requirement. It is simply what was known at the time.

Separate the reusable model from the changing experience

A shared semantic model allows new reports and questions without rebuilding the same business logic.

Reuse once

Measures, relationships and business definitions support multiple experiences.

Change safely

Smaller report changes can be made without duplicating core logic.

Answer faster

Existing model coverage can satisfy part of a new request immediately.

MODEL = durable capability | REPORT = evolving experience

Make improvement visible, governed and repeatable

Small changes reduce risk, create learning and keep the product aligned to real use.

01	OBSERVE	Usage, feedback, reliability
02	PRIORITISE	Decision value, risk, effort
03	BUILD	Small, reversible increment
04	VALIDATE	Technical and business checks
05	RELEASE	Communicate, adopt, measure

The benefits compound across the lifecycle

Continual improvement protects relevance while steadily increasing trust, speed and reuse.

FASTER RESPONSE

Now

More of the next request is already available.

HIGHER TRUST

Reliable

Definitions and quality issues are improved where people use them.

LOWER DUPLICATION

Reuse

Shared models reduce parallel extracts and recreated logic.

BETTER PERFORMANCE

Scale

Queries, calculations and models are optimised over time.

GREATER ADOPTION

Embed

Feedback improves usability and internal capability.

CONTROLLED INNOVATION

Learn

Small reversible changes make experimentation safer.

The value is not only a better report. It is a more responsive decision system.

Treat Power BI content as a managed product

Business ownership keeps relevance high. A CoE provides standards, enablement and safe delivery paths.

BUSINESS OWNER

- Own outcomes and priorities
- Clarify definitions and acceptance
- Decide when change creates value

PRODUCT TEAM

- Evolve model and reports
- Test quality, performance and security
- Release small increments

CENTRE OF EXCELLENCE

- Set guardrails and patterns
- Enable internal capability
- Monitor estate-level risks and reuse

Shared cadence: intake → prioritisation → increment → validation → adoption → learning

Move from project closure to product cadence

Do not launch another governance programme. Establish a practical rhythm around one high-value analytics product.

0–30 BASELINE

- ✓ Name an accountable owner
- ✓ Capture usage, pain points and risks
- ✓ Separate model debt from report requests

31–60 PROVE

- ✓ Prioritise 2–3 small changes
- ✓ Deliver with clear success criteria
- ✓ Validate with users and capture learning

61–90 EMBED

- ✓ Publish a visible change cadence
- ✓ Create lightweight release notes
- ✓ Review reuse, adoption and next priorities

Success measure: a repeatable cycle that delivers evidence, not a promise that change will stop.

THE DECISION

Fund an evolving analytics capability, not a finished artefact.

A “one and done” mindset does not remove change. It merely pushes change into spreadsheets, extracts and unmanaged workarounds.
